- > Software platform on Microsoft's development technology, resides 'in-house'
- > Highest encryption techniques applied, incl. real-time security policy
- > Partner network provides newest hardware technology

- > Highest Security
- > Enhanced Productivity
- > Energy Savings
- > Internet of Things
- > Freedom of Choice
- > Happy Users

In most buildings, many devices and systems like camera's, access systems and office equipment are connected to the internet. People expect to use and manage these devices everywhere and anywhere, using their device of choice. The Internet of Things is coming to all of us rapidly.

Smart Building Solutions for Happy Users

Immotix is built around the concept of many individuals using a building. Owners, facilitators, employees and visitors; everybody will benefit by bringing a large variety of common and often unconsciously used technology to one single platform.

INTERNET OF THINGS

Immotix adopts most standard access, security and office network technology. We team up with many well-known vendors, using world standards. We unlock and enrich build-in functionality and let you benefit from the Internet of Things in each of your office buildings.

A connected world sounds futuristic and vulnerable to hackers. Immotix provides ease of mind in this new arena.

Connecting different technology, like a climate system with an access control system, provides a platform to manage costs and improve comfort hence productivity.

Typical use starts with connecting existing equipment. Customers explore and familiarize using the Immotix App. When additional systems and devices become part of the Immotix network, customers experience a sharp increase of business benefit.

HAPPY USERS

Immotix believes Happy Users are people in control of their working environment, relieved of technology burdens. Surrounding office equipment works seamless with productivity tools.

The vast functionality of personalized 'if-this-then-that' business rules often surprise users, bringing each day a 😊 to their face!

SECURING YOUR FUTURE

Using very high encryption, Immotix cares for outside vulnerability. Combining (camera) security, fire-detection and access control systems can become a life-saving answer in case of an emergency. Immotix allows to add rules and alerts so besides security personnel all users can be alerted simultaneously.
